

Simple and typical villa in the desired land

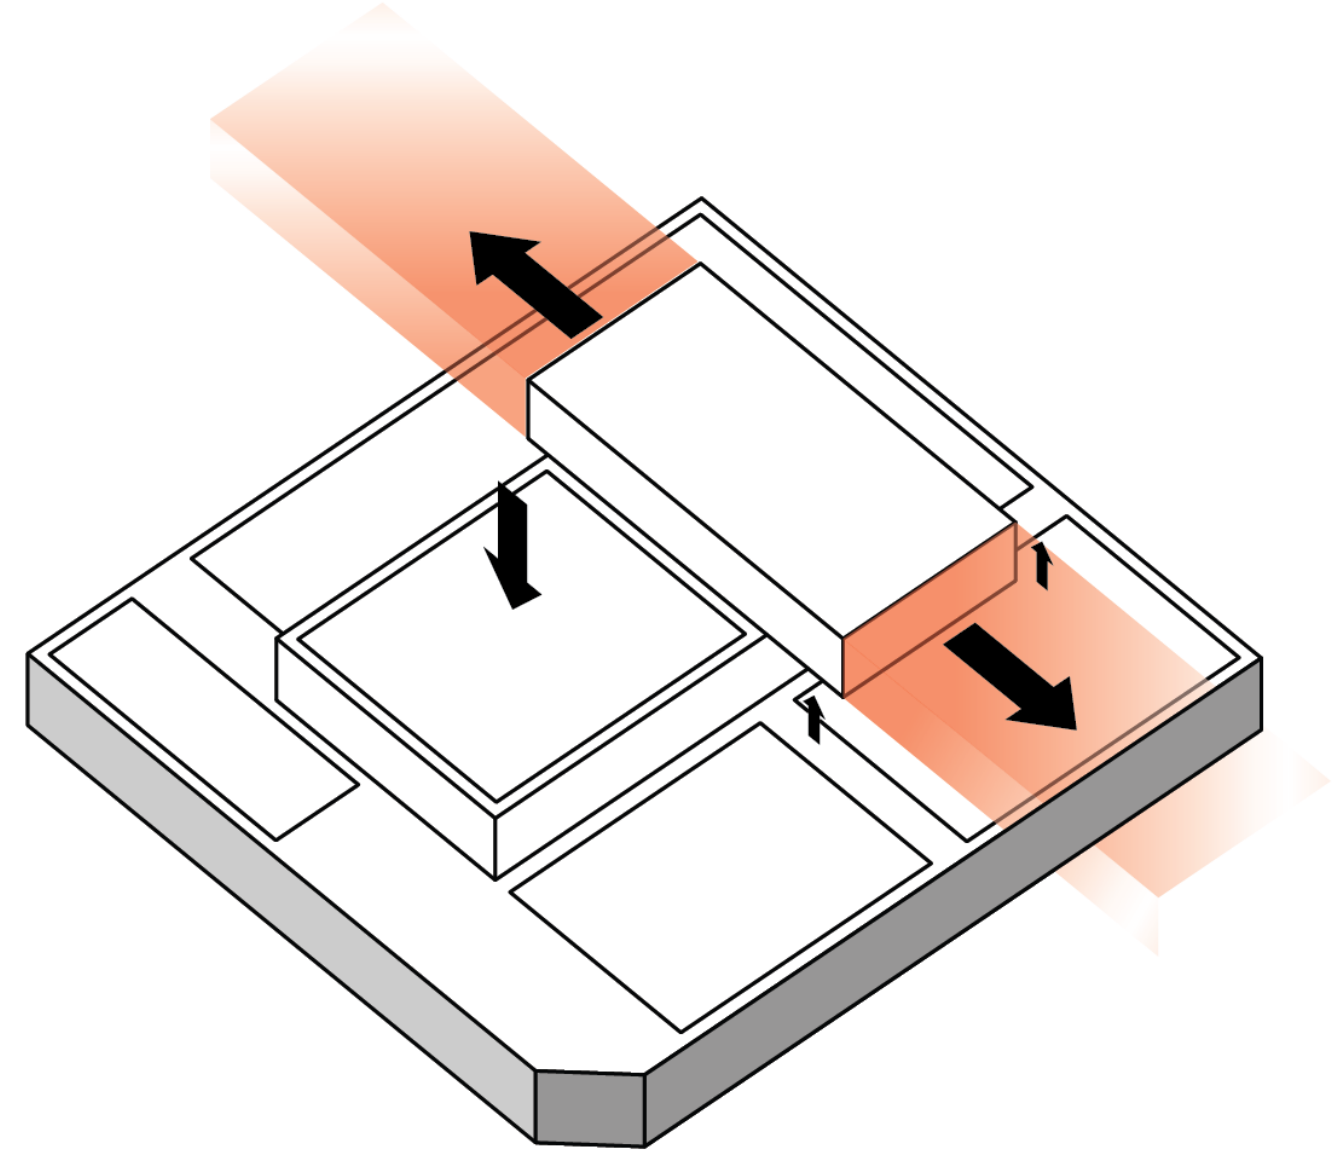

A villa situated in the middle of the land
with the courtyard divided into two sections

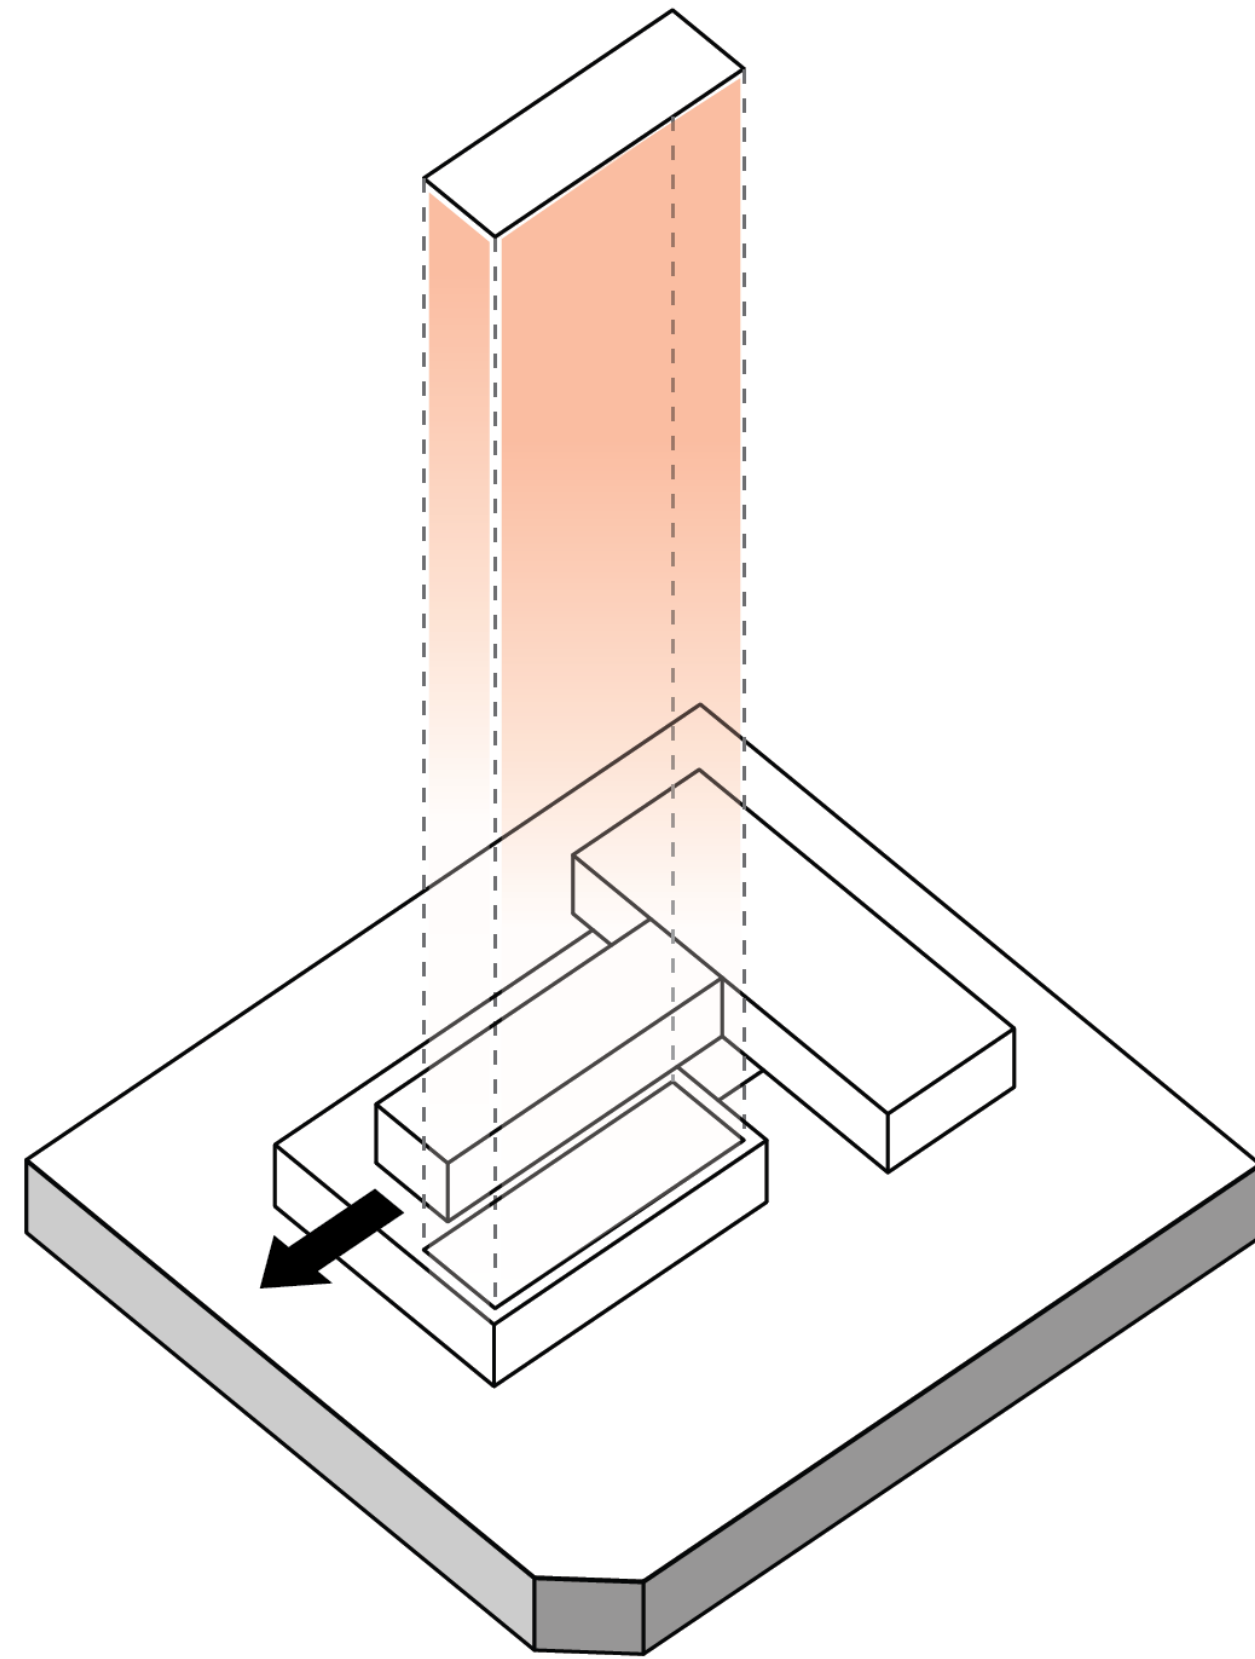

The villa is positioned in the middle of the land with the courtyard designed to surround the villa

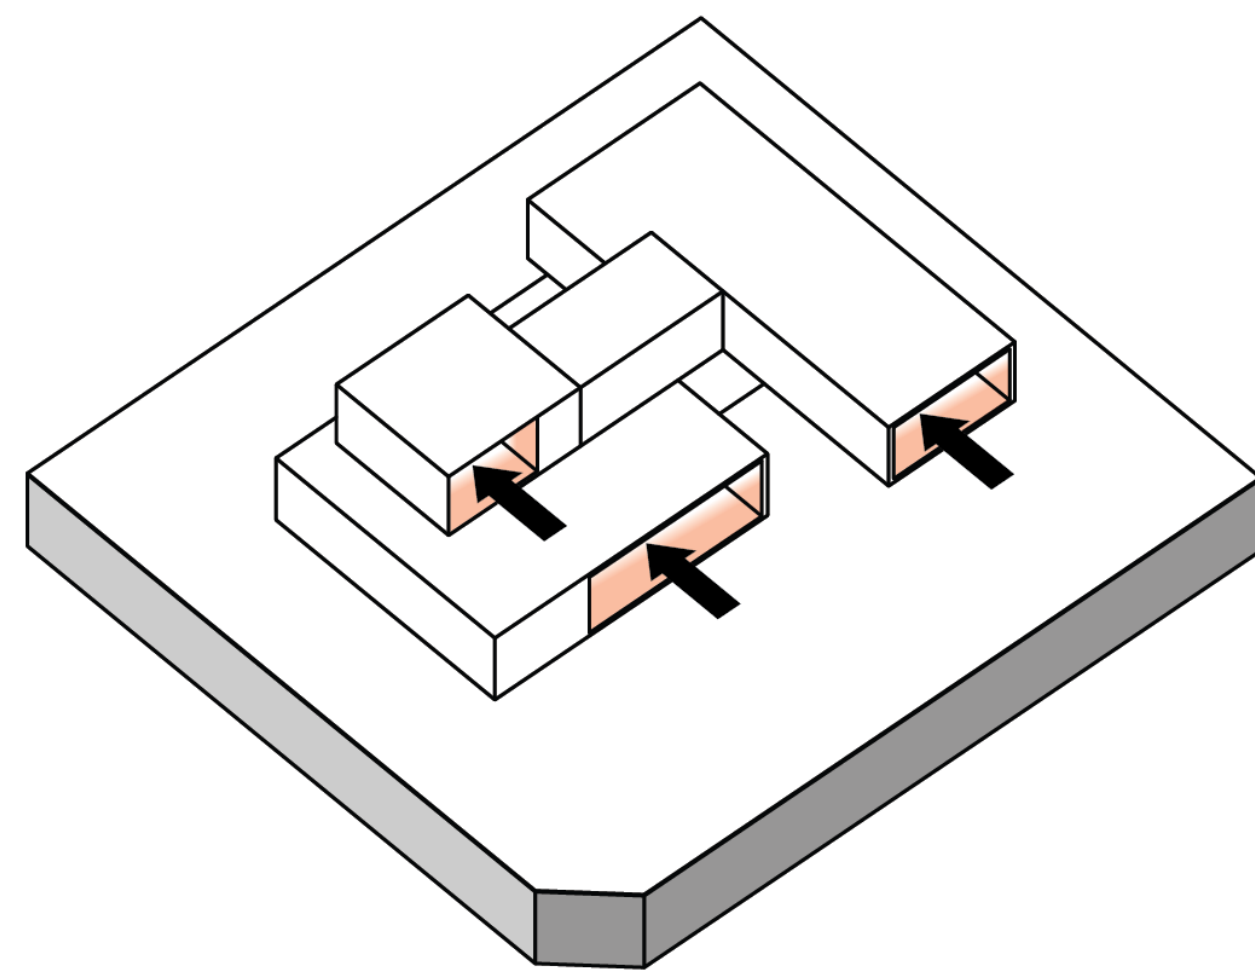

Initiating the process of creating a volumetric composition and forming private yards with more space

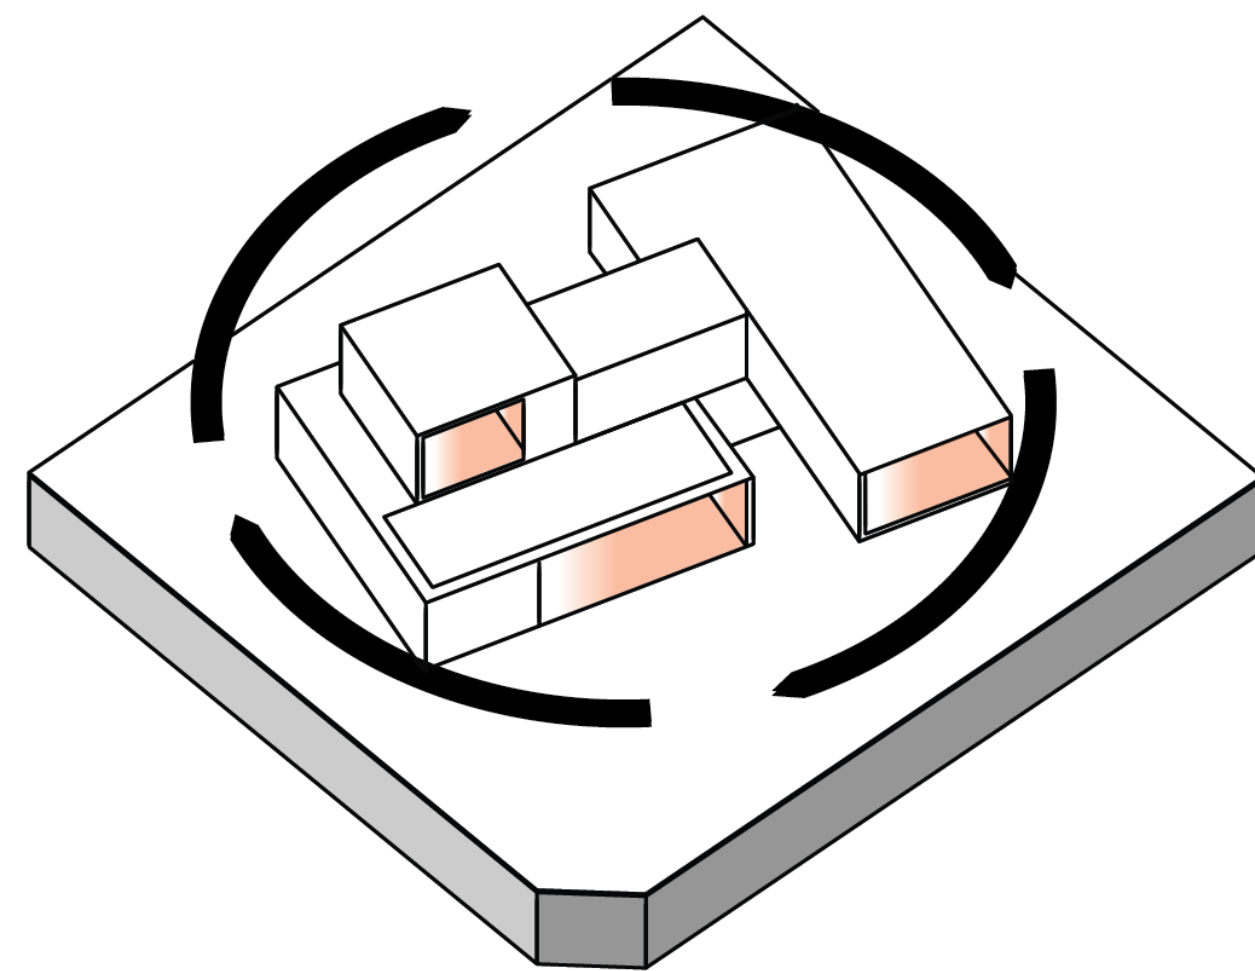

Rearranging volumes around to create
a volumetric composition of villas

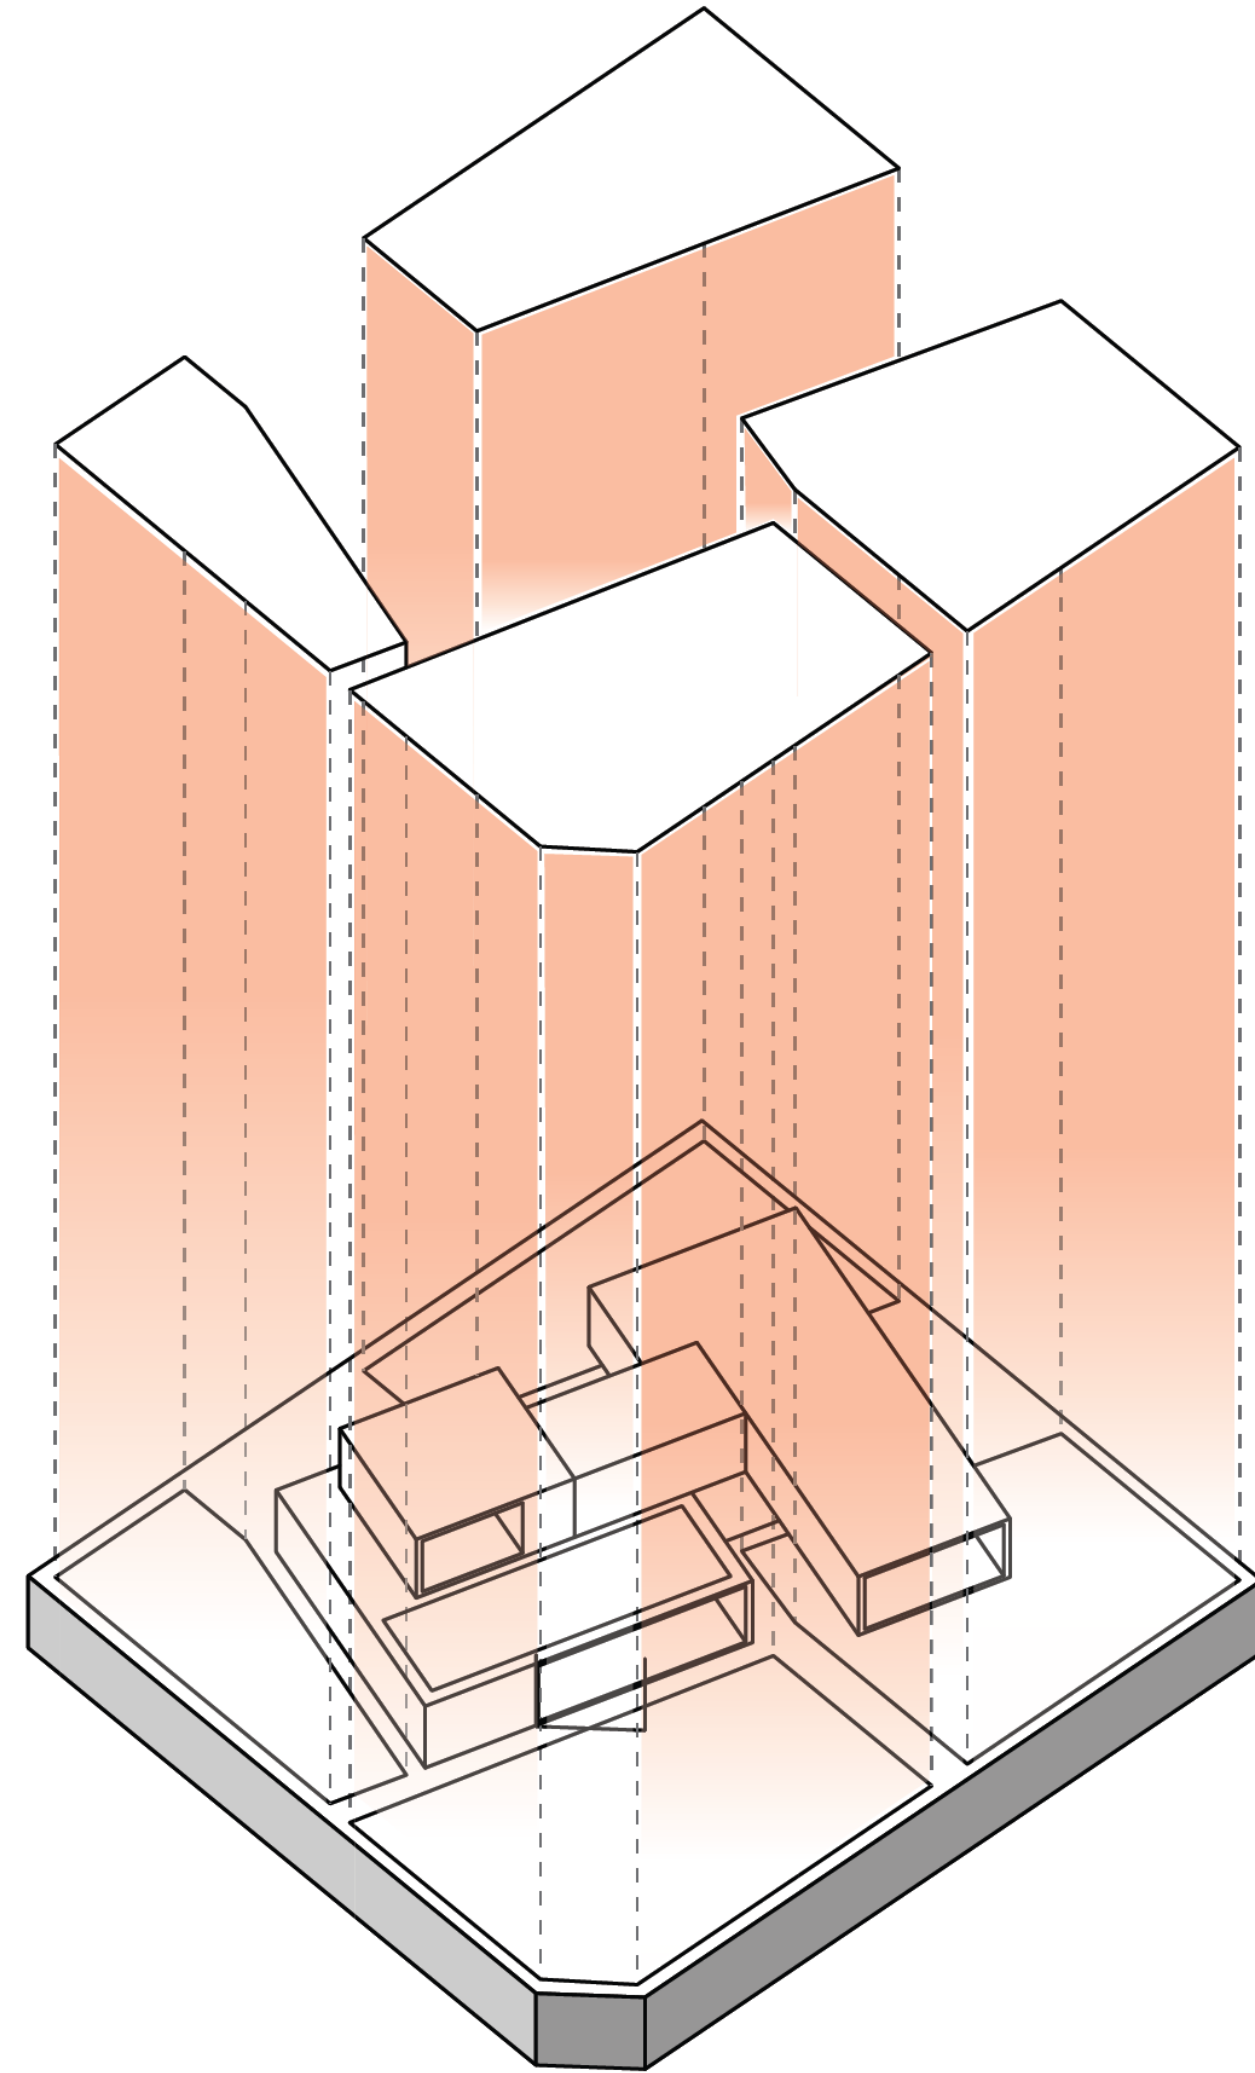

Moving cube-shaped volumes on top
of each other to create villa terraces

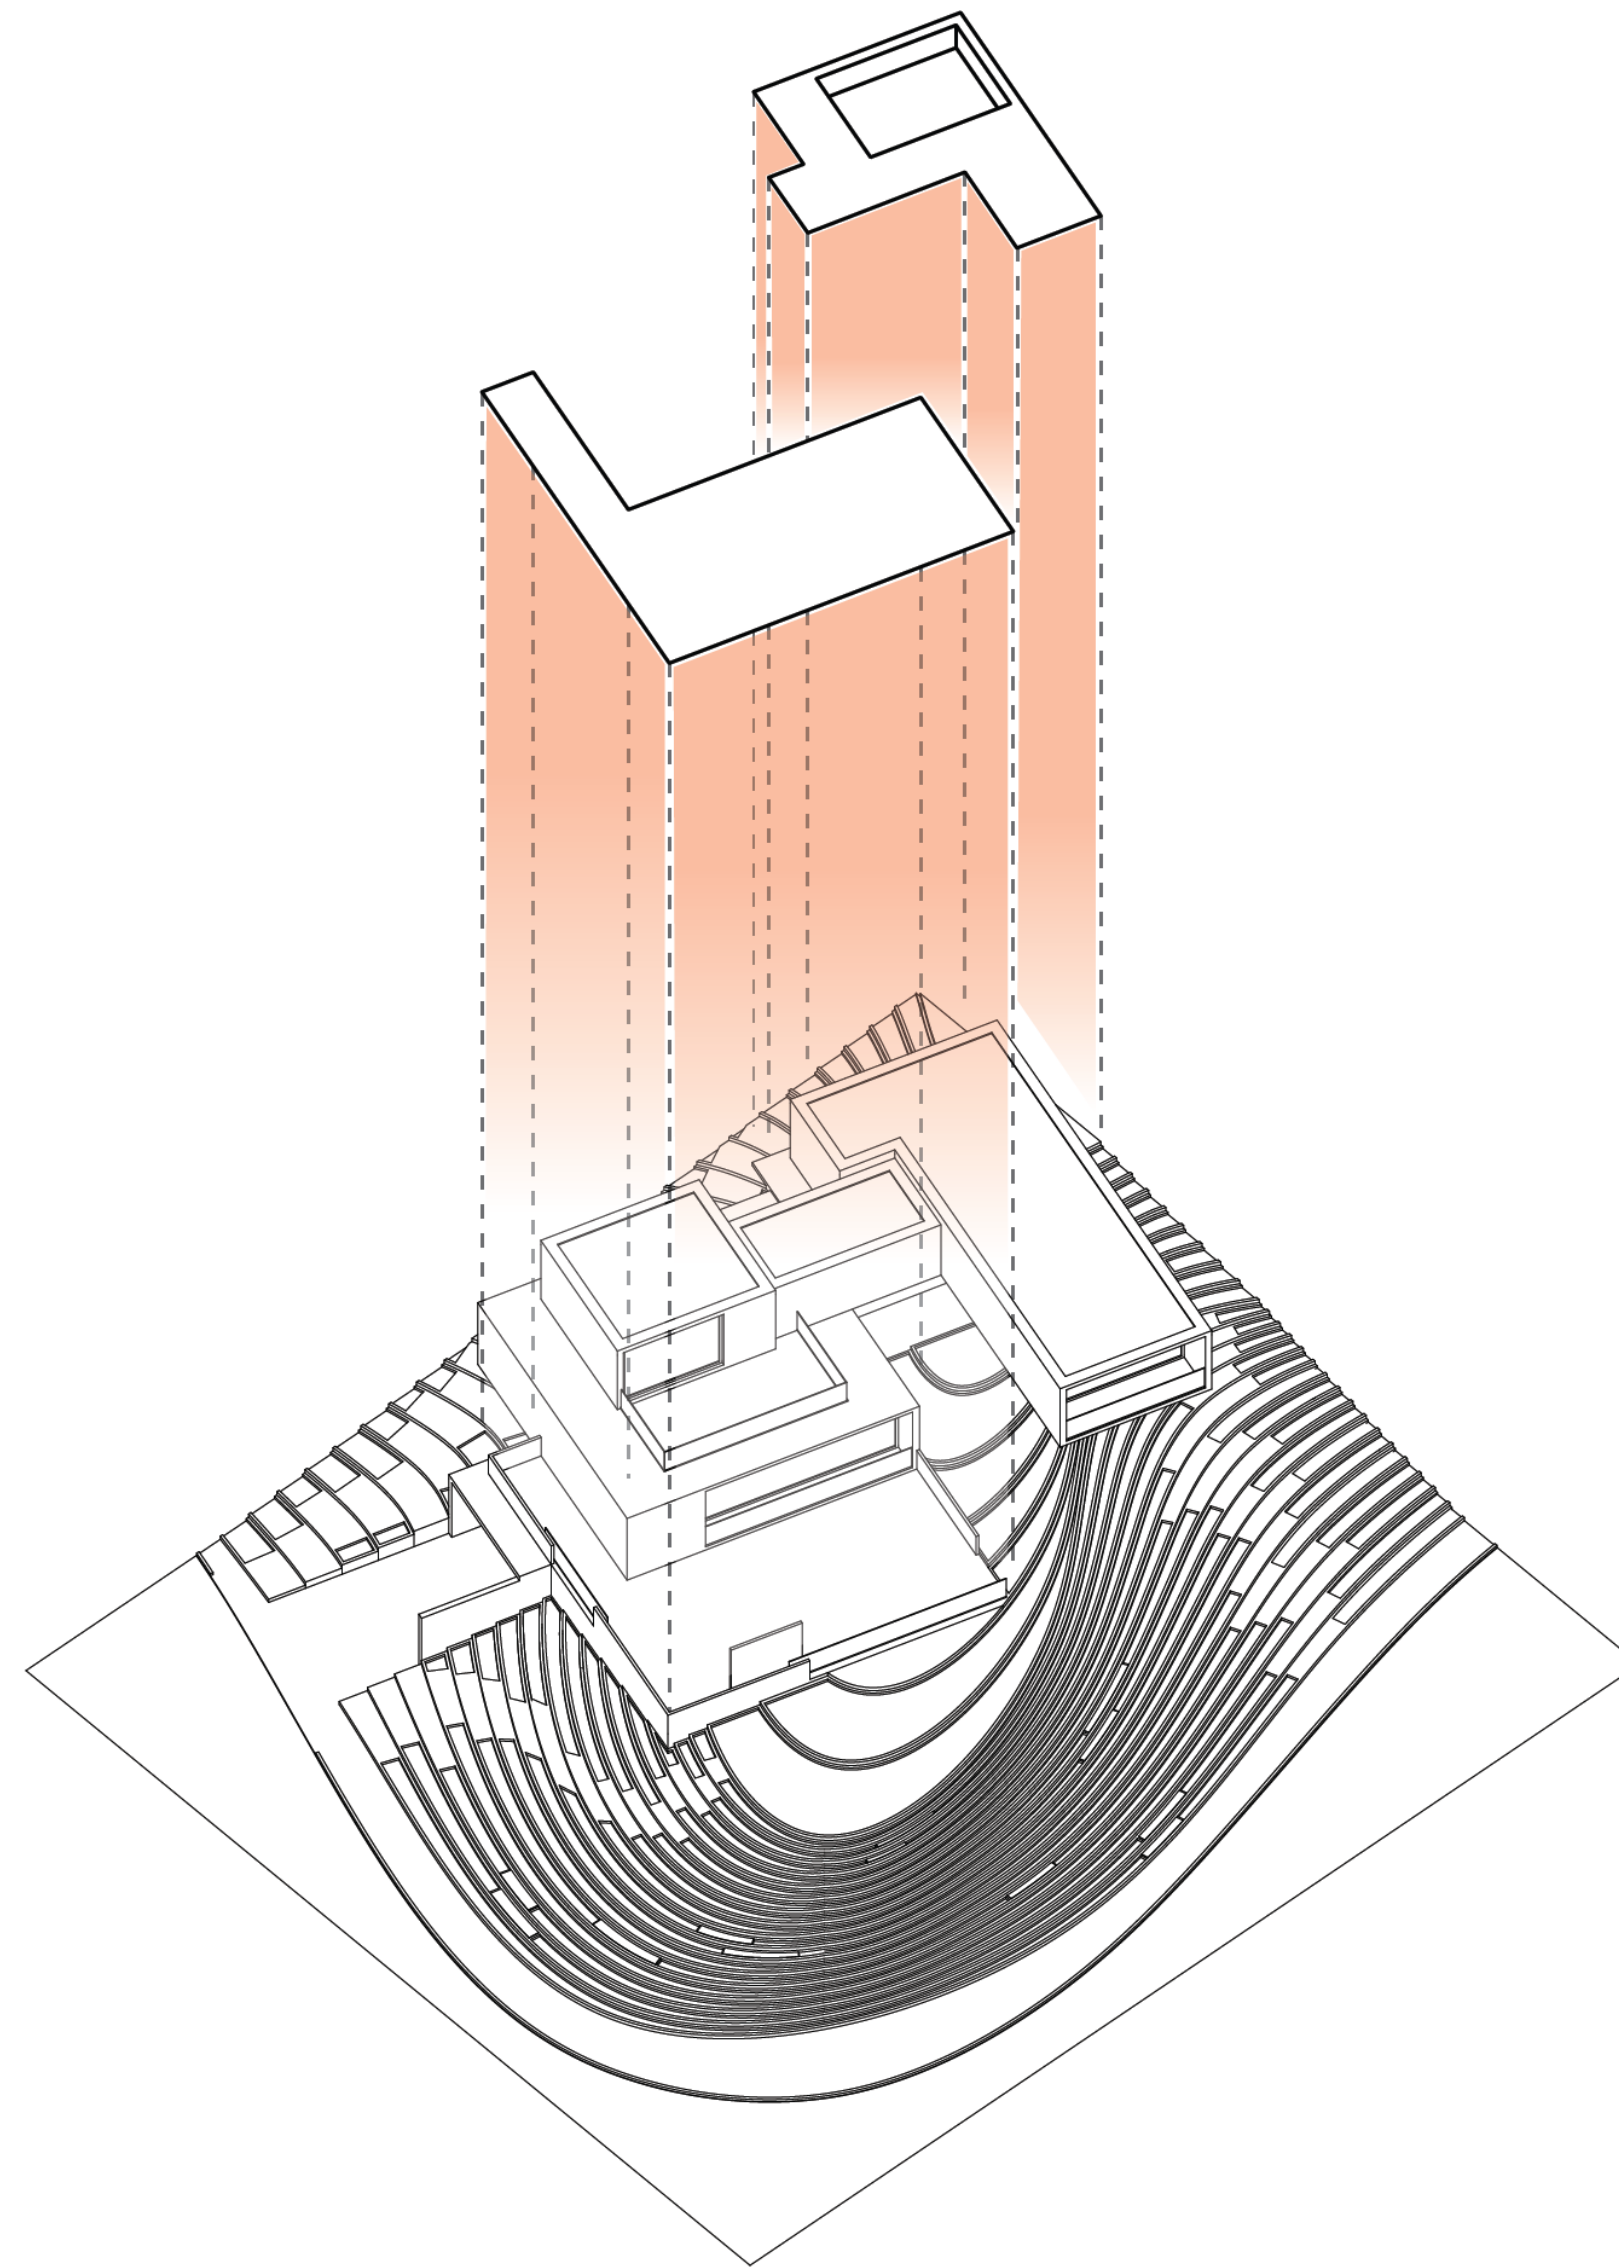

Moving the faces of cube-shaped volumes inward to create villa openings.

Rotating the entire volume of the villa by 15 degrees to optimize sunlight exposure and enhance the view

Changing the geometry of private yards by rotating the villa by 15 degrees

The overall geometry of the formed villa yards after being placed on the landscape site has been established
